A FOCI WEBINAR WORKSHOP SERIES

The **Let's Talk** workshop series aims to enhance the profile, reach, and impact of FOCI research through presentations, discussions, and activities. Each workshop will be led by FOCI researchers. They will reflect on key findings in their research related to project objectives, and address how their research can enhance efforts to better understand, design, develop, and manage diverse infrastructures in ways that are more sustainable, safe, and inclusive for coastal communities and ocean industries challenged by ocean, climate, and social change. The series will inform and advance efforts to document, synthesize, and communicate lessons learned from FOCI, as a whole.

Let's Talk Webinar 3

Coastal Risk Communication and Community Resilience: Exchanging Knowledge and Building Connections through Existing Communities of Practice

Date: Wednesday, March 15, 2023

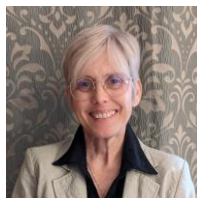

Time (1 hour duration): 8am PT / 11 am ET / 12 pm AT / 12:30 pm NT

Location: Online – Webex. Please contact foci@mun.ca for the event link. The event will be recorded.

Join us to learn how FOCI projects and researchers can benefit from connecting with coastal risk communication and coastal community resilience communities of practice. CoPs, with their unique combination of practitioners and researchers that cross disciplines and sectors, create ideal venues for knowledge exchange and meaningful connections among members. Team Leads from the Coast and Ocean Risk Communication Community of Practice ([CORC CoP](#)) and the Canadian Coastal Resilience Forum ([CCRF](#)) will provide overviews of their communities and share their experience in organizing engagement, outreach, and communication activities. This is a great opportunity to meet people who can connect you and your research with wider audiences for knowledge exchange and mobilization.
